GLOBAL VIRTUAL WORKSHOP
Building Urban Economic Resilience during and after COVID-19

ACTIONS FOR RESILIENCE

LOCAL IMPLEMENTATION
- Identify Implementable Actions
- Identify Barriers to Sustainable Urban Development

FINANCING URBANIZATION
- Strengthen Municipal Finance
  - Increase Creditworthiness
  - Identify PPP Investment

PLANNING AND DESIGN
- Thematic Strategies
- Resilience-Based Planning

NATIONAL URBAN PLANNING
- Multi-Stakeholder Decision Making
- Align Actions with SDG Indicators and International Agenda

RULES AND REGULATION
- Integrate with Existing Legal Frameworks
- Create Monitoring Strategy

ARTICULATION WITH THE NEW URBAN AGENDA
WHAT IS URBAN RESILIENCE?

Urban resilience is the measurable ability of any urban system, with its inhabitants, to maintain continuity through all shocks and stresses, while positively adapting and transforming toward sustainability.
For most of the cities the COVID-19 crisis represented the challenge of unscalable and unprecedented dimensions they were not prepared to face. According to the results, around 55% of the cities did not have any emergency response plan in place before the COVID-19 crisis took place.

In some regions, lack of timely response for economic measures to help the most vulnerable population has led to a failure to abide restrictive measures by the population and resulted in even heavier burden on already overloaded healthcare systems.

Most of the cities are now developing the economic reanimation plan for at least 2020 horizon and it is increasingly common for local governments to search for innovative sources of finance together with citizens, businesses and organisations.
6. Contribution of LG, Central Government and local private stakeholders in addressing COVID impacts
8. What measures has the city taken and/or is planning to manage the impacts of the COVID-19 crisis?
